SUMMARY

Full-Stack Engineer with 1.5 years of experience building REST APIs, customer-facing React interfaces, and CMS integrations with TypeScript, Node.js, and PostgreSQL. I own features end-to-end, from UI to backend business logic like revenue calculation and wallet flows, and build with reliability in mind.

EXPERIENCE

SDE 1 at Logipod Logistics | Link *July 2026 – Present*

- Building **Sharkship Cargo**, a B2B courier aggregator, from scratch on a Node.js microservices architecture, owning seller onboarding, order creation, shipment lifecycle, payments integration, seller wallet, and revenue logic.
- Integrated with courier partners including Amazon ATS, Delhivery, Shadowfax, and India Post through REST APIs, and implemented a Delhivery webhook to automatically capture and process weight disputes.
- Built scheduled cron jobs to sync shipment status and tracking from courier partners, and to generate daily order-dump summaries and operations-team reports, replacing manual data pulls.
- Launched the **Logipod Website** with a Sanity CMS blog, automated lead pipeline, and Framer Motion/WebGL animations across 10+ routes.
- Own the customer and admin panels for **Sharkship**, company's separate B2C courier aggregator, with a backend-heavy focus on PostgreSQL, revenue calculation logic, and the seller wallet system.
- Implementing agentic AI workflows in production as part of the team's AI initiatives, cutting manual efforts by 30%.

SDE 1 at Kazam EV Tech *September 2025 – June 2026*

- Built 15+ production pages for the B2C EV charging platform from Figma designs in collaboration with UI/UX designers, using Next.js, React.js, and TypeScript, driving 6.8K+ monthly visitors with 10% month-over-month growth.
- Created and connected REST APIs (Express.js, MongoDB) with the frontend to power charger discovery and session management.
- Owned the website's SEO from scratch: added dynamic meta tags, structured data, and SSR, taking the site from zero search visibility to ranking on target keywords within 3 months.
- Integrated an AI-powered chatbot into the platform, building the entire frontend interface including conversation UI, real-time message streaming, and state management using Next.js + TypeScript.
- Improved platform reliability by fixing 50+ production bugs and shipping weekly releases in close collaboration with product and backend teams.

Programmer Analyst at Cognizant *May 2025 – August 2025*

- Developed and optimized low-latency software modules adhering to OOP principles using Java.
- Created automated API test suites (Postman, Selenium) covering 30+ endpoints, reducing manual QA effort by ~20 hours/sprint and catching regressions pre-deployment.

SKILLS

Languages: JavaScript, TypeScript, C, C++, Java
Frontend: Next.js, React.js, Redux Toolkit, Context API, Tailwind CSS, Framer Motion, HTML5, CSS3
Backend & Database: Node.js, Express.js, REST APIs, MongoDB, PostgreSQL, SQL
AI-Assisted Development: Claude Code, GitHub Copilot
Tools: Git, GitHub, GitHub Actions (CI/CD), Postman, VS Code, Docker, AWS (EC2, S3)
CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS

PROJECTS

Kazam EV Tech - Solution Finder & Lead System Live *October 2025 - Present*
Next.js, React.js, TypeScript, Tailwind CSS, Node.js, Framer Motion

- Architected the Kazam Solution Finder, a multi-step interactive quiz routing visitors across 7 product lines (CPO, fleet, leasing, energy management, roaming, hardware and home app) based on use-case, reducing sales-team triage on inbound leads.
- Designed a unified form-overlay system integrated with HubSpot across product and solution pages.

EDUCATION

Madan Mohan Malaviya University of Technology *Oct 2021 – May 2025*
B.Tech – Electronics and Communication Engineering, CGPA: 7.91/10

ACHIEVEMENTS

- 1st Position at Codezilla by IEEE-MMMUT (500+ participants).
- 1st Position at Techazar in TechSrijan-2022 (500+ participants).
- Solved 500+ problems across LeetCode, GFG, CodeChef, and HackerRank.
